DEPARTMENT OF ORAL MEDICINE AND RADIOLGY
ON WEDNESDAY 7th MARCH, 2018

VENUE
LECTURE HALL A
BHARATI Vidyapeeth
(Deemed to be University)
DENTAL COLLEGE AND HOSPITAL, PUNE.
The term LASER is an acronym for ‘Light Amplification by the Stimulated Emission of Radiation’. Since its first application in dentistry by Miaman, in 1960, the laser has seen various hard and soft tissue applications. In the last two decades, there has been an explosion of research studies in laser application. In hard tissue application, the laser is used for caries prevention, bleaching, cavity preparation, dentinal hypersensitivity, growth modulation and diagnostic purposes. Soft tissue applications include wound healing, removal of hyperplastic tissue, uncovering of impacted or partially erupted tooth, photodynamic therapy for malignancies and photostimulation of herpetic lesions. Use of the laser is proven to be an effective tool to increase efficiency, specificity, ease, and cost and comfort of the dental treatment. We cordially invite you for the LASERS programme.
